The rigid scientific disciplines of the past are blurring and the Natural Sciences Tripos* reflects that there are no hard boundaries between the different sciences.

Why study Natural Sciences?
Natural Sciences is the framework within which most of the sciences are taught in Cambridge and allows you to study a range of both biological and physical sciences.

The flexibility of Natural Sciences means you can:
- Study a range of new and familiar areas in the sciences before deciding what to specialise in.
- Discover the interconnections between apparently discrete subjects.
- Gain experience of using a range of different scientific methods.

“Being taught by your subject’s leading minds is an experience in itself, and who can explain ideas better than the people who actually came up with them?”

Nick, Natural Sciences Student

* Tripos is a word commonly used in Cambridge to refer to courses
Biological problems are increasingly being solved using techniques which require an understanding of physics and chemistry, just as the more pressing problems being addressed by chemists and materials scientists require an understanding of biology. The Natural Sciences course can provide you with experience in a range of different scientific disciplines that will enable you to make links between those disciplines.

Choice
A significant proportion of students change direction within the Natural Sciences framework and end up specialising in a different area to the one they anticipated at the outset of the course. Indeed, because students choose three options in the second year, a definite area to focus on is only required when students enter the third year of study.

New Subjects
Try out new subjects which are not normally studied in schools, such as Materials Science, Earth Sciences and Genetics.

Why Study Natural Sciences?

Study science as it is in the real world

Why study at Cambridge?
Whether you are studying liquid crystals, ion channels in cell membranes, black holes or holes in the ozone layer, the world class University of Cambridge is one of the most exciting places to study for a science degree.

We have some of the world’s best scientists, teaching and researching at the very forefront of current scientific knowledge, and tackling some of the most important challenges of today and tomorrow.

We’ll be teaching you not only to become a scientist, but to become one who progresses their area of science over the coming years; someone with their own ideas and opinions who initiates rather than imitates.

How can a Cambridge Natural Sciences graduate share the same level of knowledge as those from a single science course?
Our graduates are expected to have achieved the same standard and depth in their final year subject as graduates from narrower courses elsewhere for three reasons:
• Our students are some of the most able and work very hard.

Transferable skills
The flexibility of the Natural Sciences course will not only give you a broad scientific background and an in-depth knowledge of the subject in which you finally specialise, but will also enable you to acquire a wide variety of all important transferable skills that are greatly in demand by employers in all sectors, for example:
• Intellectual skills (e.g. critical thinking, analysis, problem solving)
• Communication and presentation skills (including written skills)
• Organisational skills (e.g. independent work, time management)
• Interpersonal skills (e.g. teamwork, negotiation, delegation)
• Research skills (e.g. data management, critical analysis)
• Numeracy and computer literacy
Teaching

Lectures and Seminars

Lectures provide a foundation for your studies and provide an opportunity to hear about a topic from an expert—in many cases, experts who are working in the forefront of scientific research. You may even find that you hear about recent research long before it is available in a textbook! Seminars are less formal than lectures and provide an opportunity to discuss a particular topic with a smaller group of students, led by an academic.

Practicals

Practicals are an important part of all Natural Sciences subjects, as they demonstrate the real-life aspects of the lectures. Practical classes will be at the heart of your learning process but they will be very different to the experiments and manipulations you may have done at school up to now. During your course, practicals might involve techniques ranging from microscopy, through to computer modelling and could involve the use of complex electronic equipment.

Supervisions

Supervisions are small-group teaching sessions led by a specialist in the subject you are studying. Supervisions are one of the distinctive features of teaching at Cambridge and will enable you to keep up with the fast pace that is required by the NatSci course. Supervisions will give you a chance to clarify anything you are not certain about, to discuss advanced topics, to engage in in-depth problem-solving, and to explore topics that particularly interest you. You will probably find supervisions both useful and challenging. You will usually be expected to prepare some work for each supervision so, as well as increasing your scientific knowledge, they will also develop your written and oral communication skills.

Original Work and Research Projects

As a Natural Sciences student you will be expected to produce an original piece of work, in the form of a research project, dissertation or both. Many students undertake at least one research project in the third or fourth year. This may give you a chance not only to make a genuine contribution to current scientific knowledge—it’s not uncommon for project work to be published in scientific literature—but also to discover whether a career in research would be right for you.

Field Trips

Some subjects will require you to go on a field trip or course, whilst for others they may be optional. Popular field trips currently include a first year Earth Sciences trip to the Isle of Arran, a second year Plant Sciences visit to Portugal and a third year Tropical Field Course to Panama organised by Zoology.

For more information about costs, visit this webpage: www.natsci.tripos.cam.ac.uk/prospective-students/costs

“The third year research project helps you to see if you want a career in research and the lab experience is highly appreciated by employers and institutes.”

Sophia, Natural Sciences Student
A good degree from Cambridge opens a great number of doors, and a broad-based course like Natural Sciences is excellent preparation for many careers in a huge variety of areas, not just the scientific sphere. The skills you develop here will make you highly employable in a range of fields.

**Careers**

**What can I do with a Natural Sciences Degree?**

A good degree from Cambridge opens a great number of doors, and a broad-based course like Natural Sciences is excellent preparation for many careers in a huge variety of areas, not just the scientific sphere. The skills you develop here will make you highly employable in a range of fields.

**In 2021 graduates joined these sectors...**

- Research (Science & Engineering)
- IT Sector (Software Development)
- Banking and Investment
- Financial Management
- Education & Teaching
- Accountancy and Tax
- Management Consultancy
- Public Service

92% of graduates were employed after six months or progressed to further study*

**Making Connections**

It is perhaps not surprising that many of our graduates go on to research careers in both academia and industry, in this country and abroad. Locally, the University has good contacts with research institutes and with the large number of hi-tech and science-based companies whose establishment in the area has been promoted by the University in recent years.

Name: Laura  
First year subjects: Earth Sciences, Evolution & Behaviour, Mathematics, Physics  
Final year specialisation: History and Philosophy of Science  
Describe NatSci in 5 words: Varied and full of potential

Name: Milena  
First year subjects: Biology of Cells, Chemistry, Physiology of Organisms, Mathematical Biology  
Final year specialisation: Pharmacology  
Describe NatSci in 5 words: Challenging, inspiring, flexible, eye-opening, fulfilling

Name: Shreshth  
First year subjects: Physics, Chemistry, Materials Science, Mathematics  
Final year specialisation: Physics  
Describe NatSci in 5 words: Broad, challenging, engaging, diverse, flexible

Name: Ella  
First year subjects: Physiology of Organisms, Biology of Cells, Evolution & Behaviour, Mathematical Biology  
Final year specialisation: Pathology  
Describe NatSci in 5 words: Rigorous, personalised, eye-opening, sociable, academic

Name: Hao Zhe  
First year subjects: Mathematics, Physics, Chemistry, Materials Science  
Final year specialisation: Material Sciences  
Describe NatSci in 5 words: The hard work pays off

Final year specialisation: Material Sciences  
Describe NatSci in 5 words: The hard work pays off

*Graduates completing between 1 August 2020 and 31 July 2021. Percentage is based on graduates who responded to survey.
Pathways through the course

Students are only asked to choose their options after being successfully admitted on to the course. You will not need to make these decisions prior to making an application. As you progress through each year of your study, your College-based Director of Studies will help you choose which pathway will suit you the best.

**Year 1 (Part IA)**

*Choose three subjects from*
- Biology of Cells
- Chemistry
- Earth Sciences
- Evolution & Behaviour
- Materials Science
- Physics
- Physiology of Organisms
- Introduction to Experimental Psychology: From Brain to Cognition*

**AND**

*Choose one from*
- Mathematical Biology
- Mathematics

**Year 2 (Part IB)**

*Choose three subjects from*
- Biochemistry & Molecular Biology
- Biology of Disease
- Cell & Developmental Biology
- Chemistry A
- Chemistry B
- Earth Sciences A
- Earth Sciences B
- Ecology & Conservation
- Evolution & Animal Diversity
- History & Philosophy of Science
- Materials Science
- Mathematical and Computational Biology
- Mathematics
- Neurobiology
- Pharmacology
- Physics A
- Physics B
- Physiology
- Plant & Microbial Sciences
- Quantitative Environmental Science

**OR**

*Choose a broad science course*
- Biological & Biomedical Sciences
- Physical Sciences

**Years 3 & 4 (Parts II and III)**

*Choose one subject to specialise in*
- Astrophysics**
- Biochemistry**
- Chemistry**
- Earth Sciences**
- Genetics
- History & Philosophy of Science*
- Materials Science**
- Pathology
- Pharmacology
- Physics**
- Physiology, Development & Neuroscience
- Plant Sciences
- Quantitative Climate and Environmental Science (Part III only)**
- Systems Biology (Part III only)**
- Zoology

*This subject cannot be taken with IA Chemistry and has a restricted number of places available.

**This subject can be taken for a fourth year (Part III) leading to a MSci degree.

Find more information about each subject at: [www.undergraduate.study.cam.ac.uk/courses/natural-sciences](http://www.undergraduate.study.cam.ac.uk/courses/natural-sciences)
Admissions and Subject Requirements

Subject Requirements
You need to have a strong knowledge base across a wide range of science/mathematics subjects. You must have A Level Mathematics and A Levels in two other science subjects to apply. Most applicants have at least three of the following A Levels (or equivalent):

- Biology
- Chemistry
- Mathematics
- Physics

Year 1 (Part IA) Options and Subject Requirements
Many options in the first year have individual A Level (or equivalent) subject requirements. This means the number of options you have will be affected by your choices at A Level. Taking additional science/mathematics AS levels may strengthen your application and increase the number of subjects you will be able to take. Some second and third year subjects also have recommended A Levels.

The next page outlines individual requirements for each option offered in the first year.

Which maths course?
There are two mathematics courses in the first year to choose from; Mathematics and Mathematical Biology.

Your Director of Studies will advise you on what will be the most appropriate mathematics course for you. This might be based on the subjects you have chosen in your first year and on the level of mathematics you have reached prior to starting the course. However, if you study Physics, you must also study Mathematics.
Options Year 2  
(Part IB)

Opposite are the prerequisite subjects for Part IB courses. Please note that some unusual subject combinations are not possible due to timetabling restrictions.

<table>

<tr>
<th>Choose THREE from</th>
<th>Part IA subjects</th>
</tr>
</thead>
</table>
| Biochemistry and Molecular Biology | **Essential:** Biology of Cells  
**Recommended:** Knowledge of A Level Chemistry is assumed |
| Biology of Disease | **Recommended:** Biology of Cells and/or Physiology of Organisms |
| Cell and Developmental Biology | **Essential:** Biology of Cells |
| Chemistry A | **Essential:** Chemistry and either Mathematics (preferred) or Mathematical Biology  
**Recommended:** Physics, Materials Science |
| Chemistry B | **Essential:** Chemistry  
**Recommended:** Biology of Cells |
| Earth Sciences A | **Essential:** Earth Sciences |
| Earth Sciences B | **Essential:** Earth Sciences |
| Ecology & Conservation | **Recommended:** Evolution and Behaviour, Physiology of Organisms, A Level Biology |
| Evolution & Animal Diversity | **Recommended:** Evolution & Behaviour in particular, Biology of Cells and Physiology of Organisms are helpful |
| History and Philosophy of Science | No previous knowledge of the subject required. |
| Materials Science | **Essential:** Materials Science |
| Mathematical and Computational Biology | **Essential:** IA Mathematics or Mathematical Biology mark minimum of 60. |
| Mathematics | |
| Neurobiology | **Recommended:** Physiology of Organisms is particularly helpful, or one other biological subject |
| Pharmacology | **Essential:** A Level Biology and/or Chemistry  
**Recommended:** Biology of Cells, Chemistry or Physiology of Organisms |
| Physics A | **Essential:** Physics and Mathematics |
| Physics B | **Essential:** Physics and Mathematics |
| Physiology | **Recommended:** Physiology of Organisms, Biology of Cells.  
A Levels in Biology, Chemistry, and/or Physics. |
| Plant and Microbial Studies | **Recommended:** One or more of Biology of Cells, Physiology of Organisms, Evolution and Behaviour |
| Quantitative Environmental Science | **Recommended:** A Level Further Mathematics |
Options Year 3 & 4
(Parts II and III)

Most students choose to specialise in ONE subject in Year 3 (Part II). However, there is an opportunity to take a more general course—Biological and Biomedical Sciences, or Physical Sciences—in which you would choose two subjects from a wider range of options. Successful completion of the third year leads to the award of a BA degree, whilst successful completion of the fourth year leads to the award of a MSci degree.

Due to the amount of laboratory space available, there is some restriction in numbers for some of the Part II subjects so, although the majority of students are able to progress to their first choice Part II Subject, this cannot be guaranteed.

“I have loved studying Natural Sciences for the past three years, as I have found all of the different courses interesting individually, and the links between them have really deepened my understanding. In first year, I enjoyed the crossovers between my three science courses, which really helped my understanding of those concepts, as I had them explained to me from multiple angles.”

Rachel
